## PROFESSIONAL SUMMARY

Entry-level **SOC Analyst** with hands-on experience building a production-style security operations lab. Proficient in **SIEM (Wazuh, Splunk)**, **IDS/IPS (Suricata)**, **NSM (Zeek)**, packet analysis (Wireshark), threat intelligence, and automated incident response. Built an AI-powered NIDS achieving **98.5% accuracy** with **94% alert reduction**. **ISC2 CC** and **Google Cybersecurity** certified. Completed Forage simulations in phishing analysis, network forensics, IAM, and fraud detection.

## TECHNICAL SKILLS

**SIEM & Detection:** Wazuh Splunk DQL MITRE ATT&CK FIM Alert Tuning

**Network Security:** Suricata IDS/IPS Zeek NSM Wireshark pfSense Scapy PCAP Analysis

**IR & Forensics:** Active Response Malware Quarantine Alert Triage HxD File Carving Steganography

**Languages & Tools:** Python SQL/SPL Bash Kali Linux Ubuntu Redis PostgreSQL

## PROJECTS

### SOC Home Lab – SIEM, IDS & Detection Engineering

🐙 github.com/raifahamed/soc-homelab

- Built a SOC lab using Wazuh, Suricata, Zeek, and pfSense for endpoint and network threat monitoring
- Created 15+ MITRE ATT&CK mapped detection rules for brute force, persistence, DNS tunneling, and C2 traffic
- Integrated VirusTotal API with automated malware quarantine achieving **<25s response time**
- Performed threat hunting and investigation across **10,000+ security events** using DQL and Wireshark

### CYBERDO – AI-Powered Network Intrusion Detection System

🐙 github.com/raifahamed/cyberdo

- Developed an AI-powered NIDS using XGBoost, Autoencoders, and Scapy with **98.5% detection accuracy**
- Engineered real-time network feature extraction pipeline with 78 behavioral indicators
- Reduced SOC alert noise by **94%** using deduplication, severity scoring, and rate limiting
- Integrated threat intelligence feeds and built a real-time SOC dashboard with live alert monitoring

### Fraud Detection Dashboard – Splunk SIEM Analysis

🐙 github.com/raifahamed/splunk-fraud-detection

- Analyzed 60-day financial transaction data in Splunk Enterprise for fraud detection
- Created SPL queries to identify suspicious transaction and behavioral patterns
- Built dashboards for security monitoring, alert visualization, and stakeholder reporting
- Applied SIEM investigation techniques for anomaly detection and alert triage workflows

### Network Forensics & Phishing Investigation Lab

🐙 github.com/raifahamed/network-forensics-lab

- Investigated phishing attacks and malicious traffic using Wireshark and PCAP analysis
- Recovered credentials, files, and attacker activity through HTTP stream reconstruction
- Performed forensic analysis including Base64 decoding, ZIP extraction, and file carving using HxD
- Conducted IOC analysis and mapped attack activity to MITRE ATT&CK techniques

## CERTIFICATIONS

Google Professional Cybersecurity Certificate

ISC2 Certified in Cybersecurity (CC) (Coursera)

Forage Simulations: Mastercard (Phishing) | AIG (Threat Analysis) | TCS (IAM) | CommBank (Fraud Detection) | ANZ (Forensics) | Deloitte (Technology Consulting)

## EDUCATION

B.E. Computer Science

Syed Ammal Engineering College

2022 – 2026 | 78%

## KEY ACHIEVEMENTS

3-Layer SOC Lab  
Endpoint + Signature  
+ Protocol Detection

📊 94% Alert Reduction  
10,000 → 600  
Actionable Alerts/Day

⚡ <25s Response  
Automated Malware  
Quarantine Script

🎯 98.5% Accuracy  
AI Detection with  
100% True Positives

✅ 100% Test Pass  
39 Functional + Security  
Test Cases

🔍 10,000+ Events  
Analyzed via DQL  
Across SIEM Platforms
